

WHAT YOU NEED TO KNOW ABOUT CORONAVIRUS

HOW CAN IT BE STOPPED?

There are steps that you can take to prevent getting the virus, and stopping its spread.

At the moment there is no medicine available to prevent or treat the virus. Conventional medicines can treat the symptoms, helping to comfort those who are infected while their immune systems fight the virus.

The best option is to avoid getting sick in the first place by:

- Washing your hands
- Knowing your HIV status, and taking your HIV and TB medication
- Getting the flu injection

Wear a disposable face mask if you are ill with coronavirus or looking after someone who is ill.
