# Mental health in SA is at shocking levels but people are not seeking help

14 November 2022 - Wits University

A new study reveals that South Africans suffer higher rates of probable depression and anxiety than other countries.

However, only a quarter of those receive treatment. Complex factors are contributors.

Mental health woes are endemic in South Africa, with adverse childhood experiences, socio-economic status, geographic location, age, marital status and education levels impacting the prevalence of mental illness.

A new paper by the Wits/Medical Research Council Developmental Pathways for Health Research Unit (DPHRU) titled, *The prevalence of probable depression and probable anxiety, and the associations with adverse childhood experiences and socio-demographics: A National Survey in South Africa*, showed that more than a quarter of South Africans suffer from probable depression with higher levels in certain provinces.

The study was [published](#) in the journal *Frontiers in Public Health*.

# But....What is Health?

---

World Health  
Organization

"A state of complete physical, **mental**, and social well-being and not merely the absence of disease or infirmity."

.....WHO

World Health  
Organization

MASO<sup>o</sup>ISE  
Health Programme

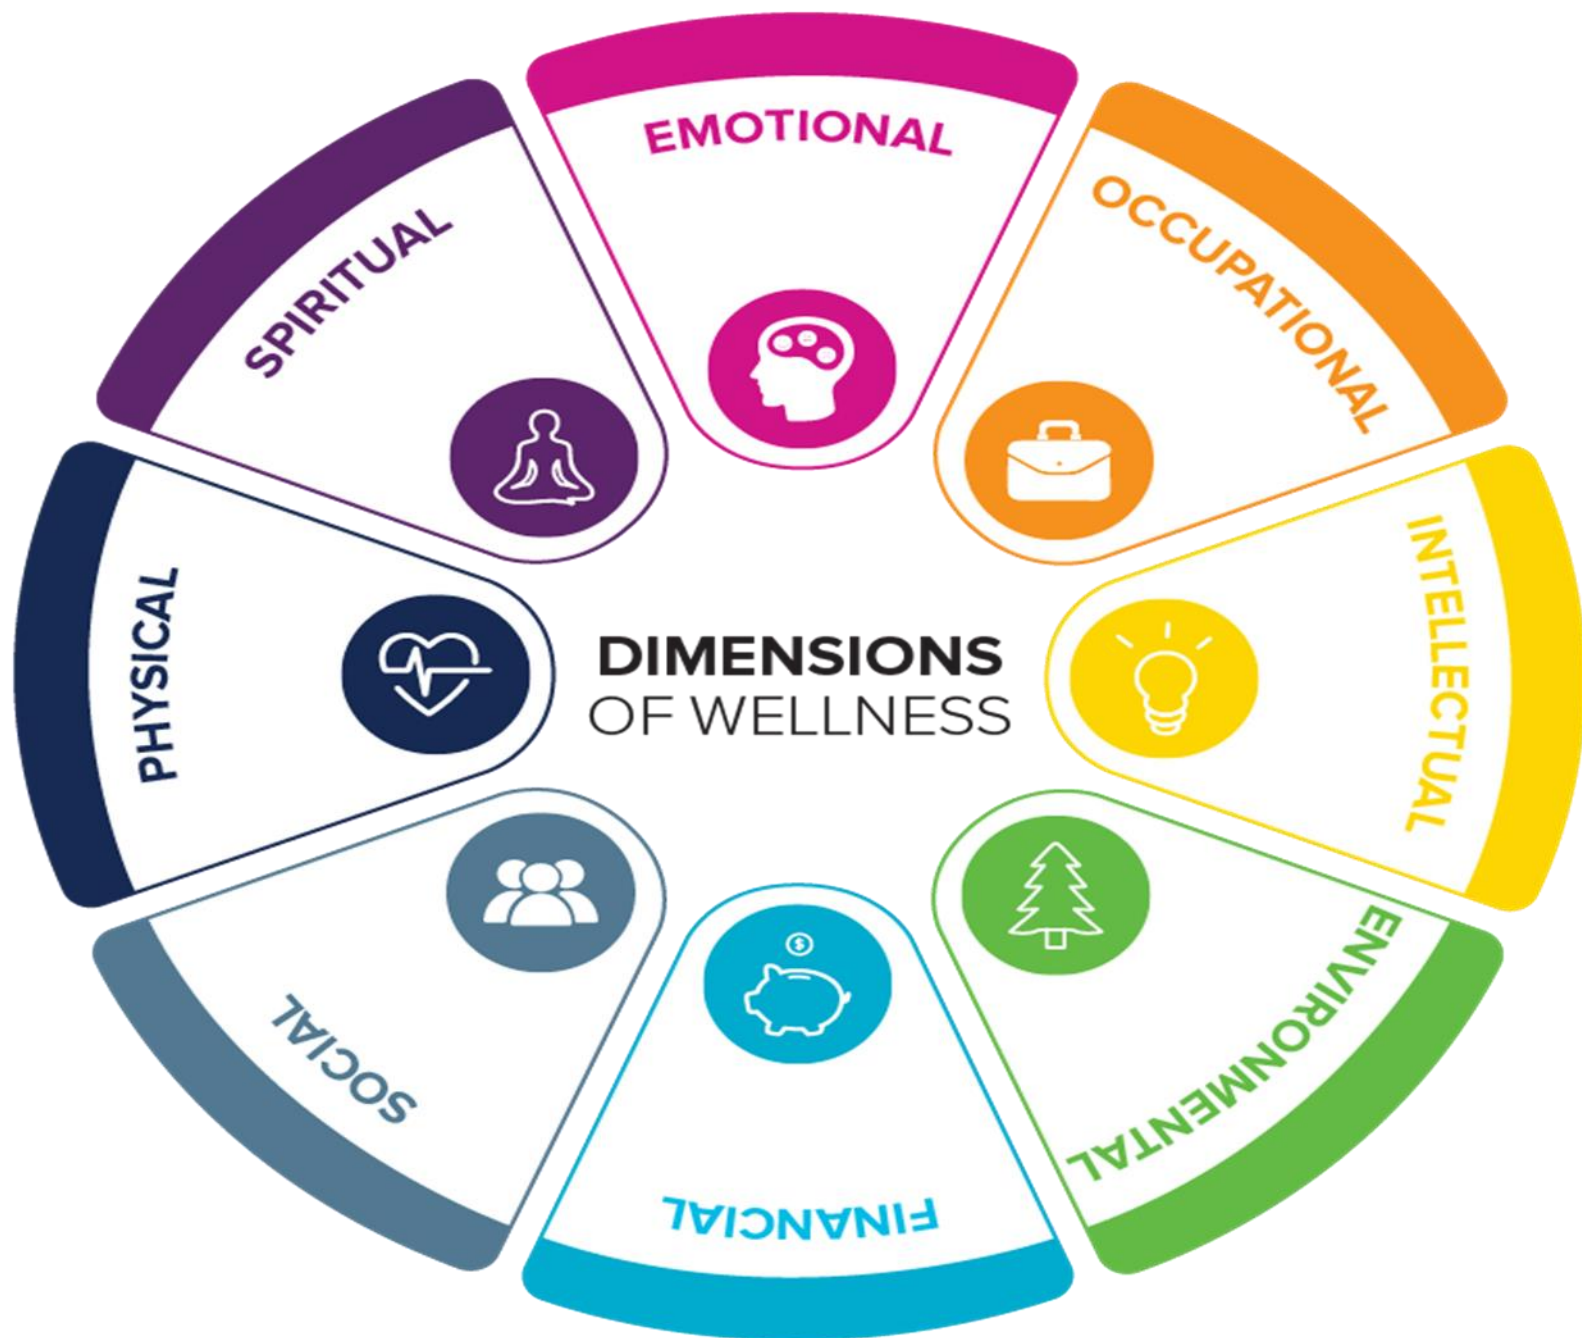

The background of the slide is a close-up photograph of numerous light-colored wooden blocks, possibly from a child's toy set, scattered across a dark surface. The blocks are of various sizes and are arranged in a way that creates a textured, geometric pattern. The lighting is soft, highlighting the natural grain of the wood.

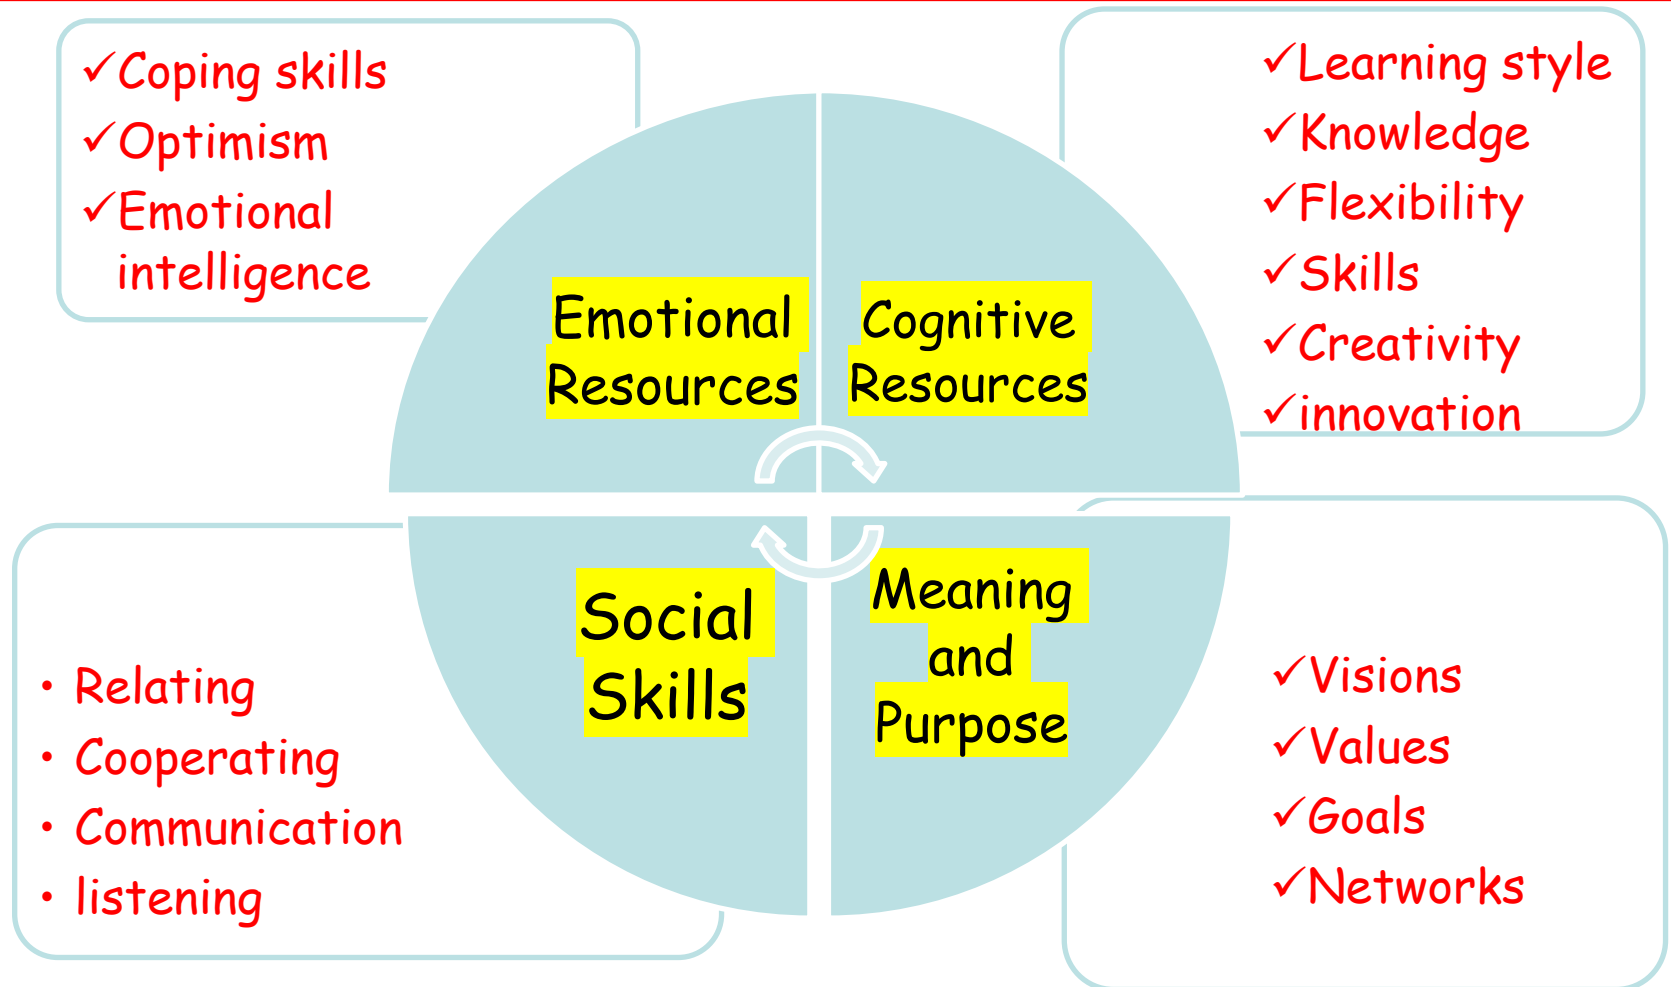

The World Health Organization (WHO)  
conceptualizes mental health as ..

"A state of well-being in which the individual **realizes** his or her own abilities, can **cope** with the normal stresses of life, can **work productively and fruitfully**, and is able to **make a contribution** to his or her community"

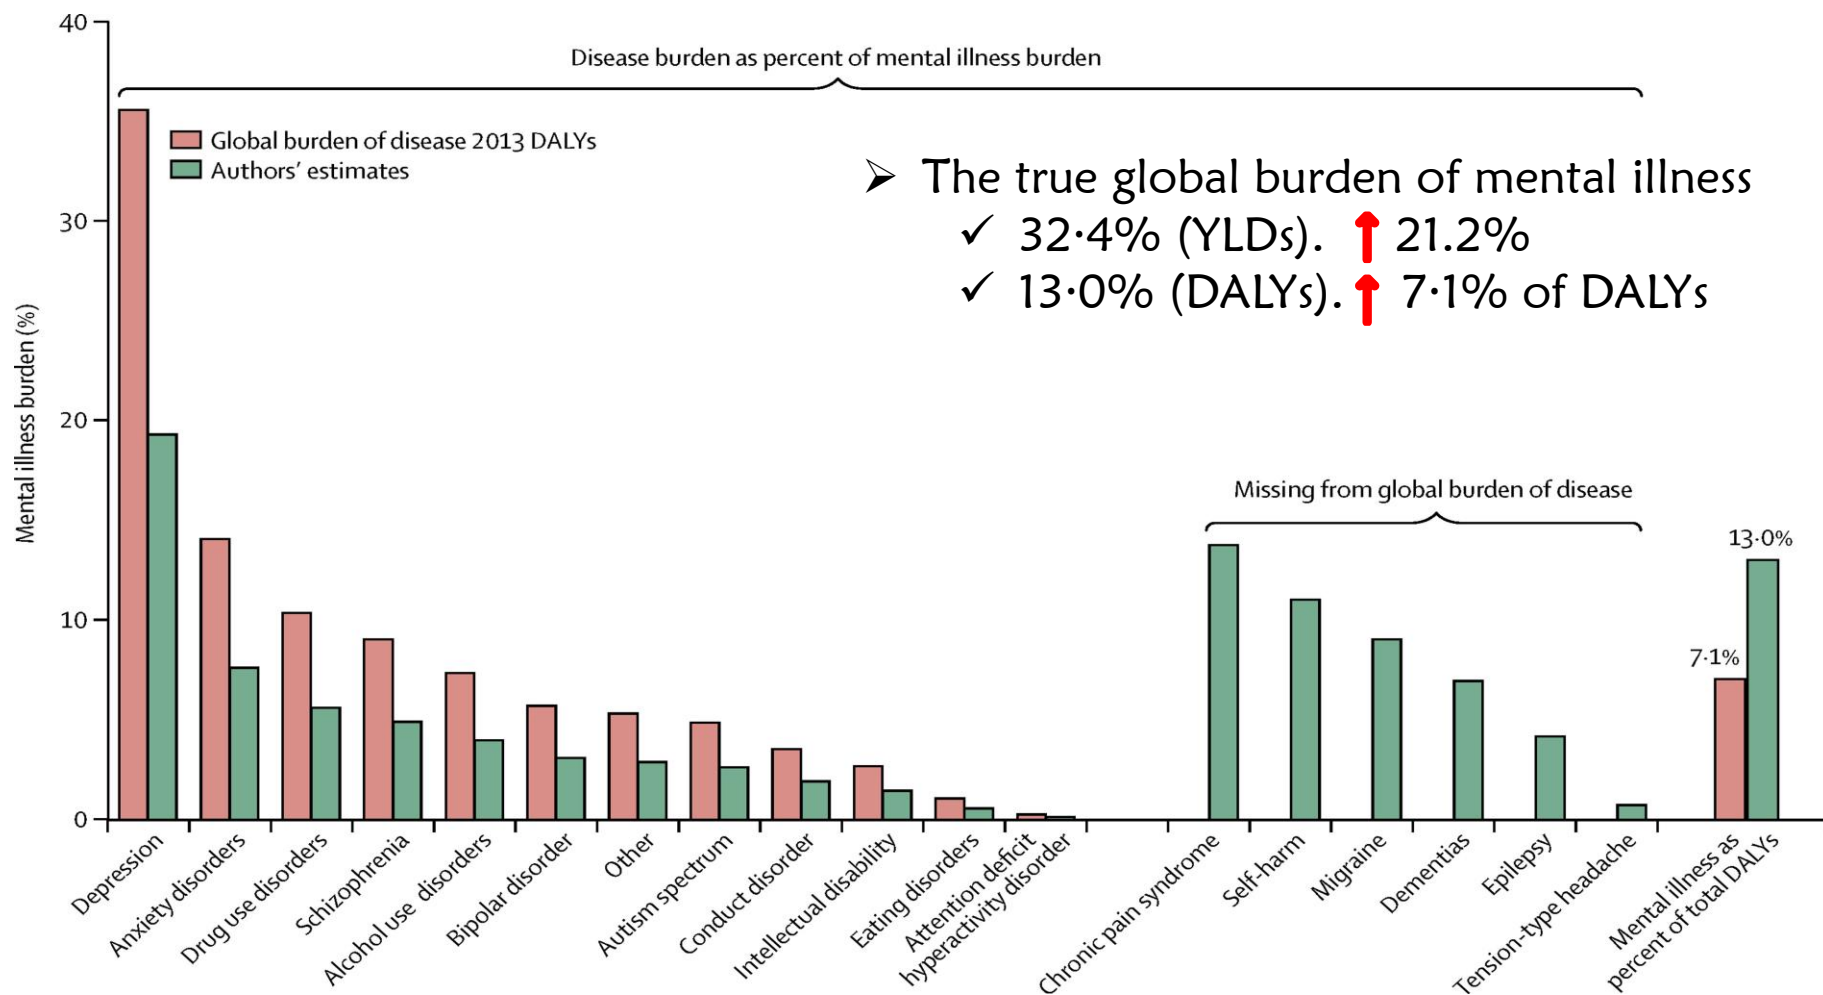

# Dimensions of Mental Health and well being

---

# Estimating the true global burden of mental illness

# The terrain of NCDs and Mental health

## 5 Major NCDs

**5X5**

Other NCDs 15%  
Trauma 9%

## 5 Major Shared RFs

# Cause of mortality in South Africa by disease grouping (1997 – 2018)

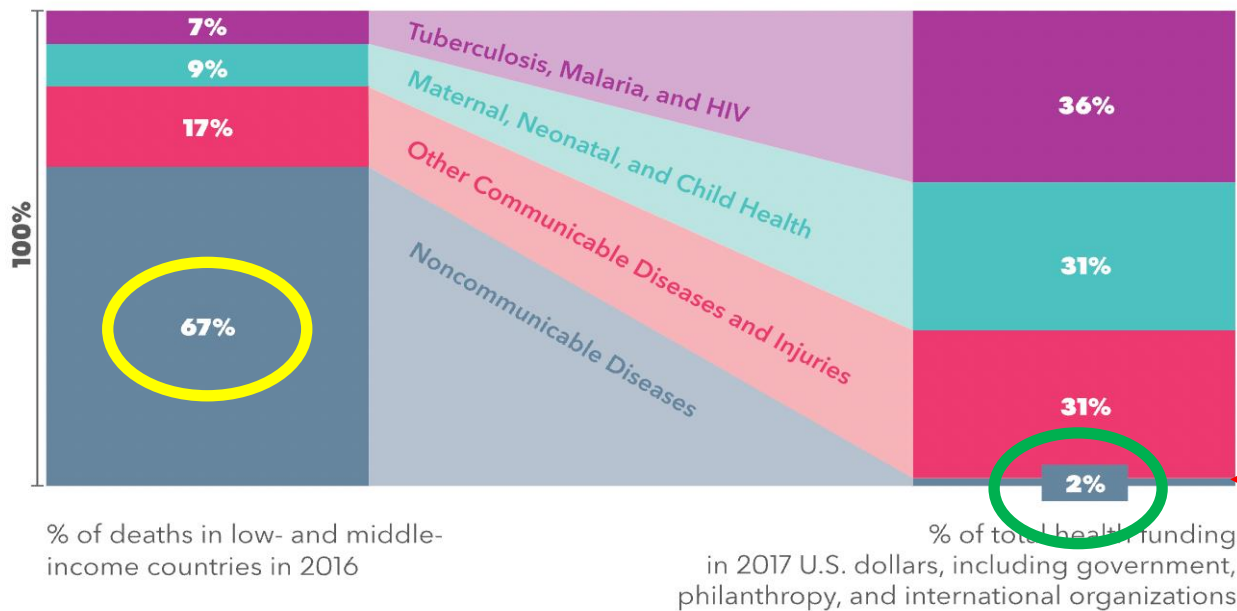

# Interaction NCDs and Mental Health

---

- ♦ Mental health conditions affect, and are in turn affected by, major NCDs
  - They can be a precursor to, or a consequence of, chronic conditions such as cardiovascular disease (CVD), diabetes or cancer
  - Risk factors for these major NCDs, such as sedentary behaviour and harmful use of alcohol, are also risk factors for mental disorders and strongly link the two.
  - They are chronic, in that they persist over time and require ongoing monitoring and management, frequently over the life-course;
  - They share common determinants, some may arise from a combination of biological, behavioural and environmental factors;
  - Substantial commonalities exist in their consequences, with all leading to significant levels of disability, which in turn diminish socioeconomic opportunities
  - mental disorders and other chronic diseases often co-occur.
  - They share Policy inertia!!

# Stove pipped financing and priorities

**Noncommunicable diseases account for 67% of deaths in low- and middle-income countries, but only 2% of global health funding addresses them**

**42 %** of this NCD funding flowed through NGOs & Foundations

# State of play-AFRO

---

- ◆ MNS Conditions combined are 5.5% of the Disease Burden for AFRO
- ◆ The most common mental health conditions in the African Region are
  - Depression (prevalence of 3.8%)
  - Anxiety disorders (3.3%)
  - Alcohol use disorders (1.3%).
- ◆ Depression and anxiety make up to 30% of general outpatient clinic consultations.
- ◆ The treatment gap (between those who need care and those who receive it) for mental health conditions in the African Region is estimated to be over 85%.

*\*To address this situation, at WHO we are working with countries to integrate mental health into primary health care and rollout the MhGap training*

- ◆ Wang et al (2017) Prevalence of depression and depressive symptoms among outpatients: a systemic review and meta-analysis BMJ Open 2017; 7(8):e017173; Ngoma et al (2003) Common mental disorders among those attending primary health clinics and traditional healers in urban Tanzania Br J Psychiatry (2003) 183: 349-55
- ◆ Evans-Lacko (2018) Socio-economic variations in the mental health treatment gap for people with anxiety, mood, and substance use disorders: results from the WHO World Mental Health (WMH) Surveys Psychol Med 2018 48(9):1560-1571

## National Mental Health Policy Framework and Strategic Plan

health

Department:  
Health  
REPUBLIC OF SOUTH AFRICA

## KEY PRINCIPLES

### Universal health coverage

People with mental disorders should be able to access, without the risk of impoverishing themselves, essential health and social services that enable them to achieve recovery and the highest attainable standard of health.

### Human rights focus

Mental health strategies, actions and interventions must be compliant with the Convention on the Rights of Persons with Disabilities and other human rights instruments.

### Evidence-based practice

Mental health strategies and interventions need to be based on scientific evidence and/or best practice, taking cultural considerations into account.

### Life course approach

Policies, plans and services for mental health need to account for health and social needs at all stages of the life course..

### Multisectoral approach

A comprehensive and coordinated response for mental health requires partnership with multiple public sectors as well as the private sector.

### Empowerment of persons at risk

People with mental disorders and psychosocial disabilities should be empowered and involved in mental health advocacy, policy, planning, legislation, service provision, monitoring, research and evaluation.

# CORE OBJECTIVES

---

1.

Strengthen effective leadership & governance for mental health

2.

Provide comprehensive, integrated mental health & social care services in community-based settings

3.

Implement strategies for promotion and prevention

4.

Strengthen information systems, evidence and research

# UPDATED MH TARGETS

## 1. Effective leadership and governance

- 80% of countries will have developed or **updated** their policy or plan for mental health in line with international and regional human rights instruments.
- 80% of countries will have developed or **updated their law** for mental health in line with international and regional human rights instruments.

## 2. Comprehensive, integrated services in community-based settings

- **Service coverage** for mental health conditions will have increased by at least half.
- 80% of countries will have doubled number of **community-based mental health facilities**.
- 80% of countries will have **integrated mental health** into primary health care.

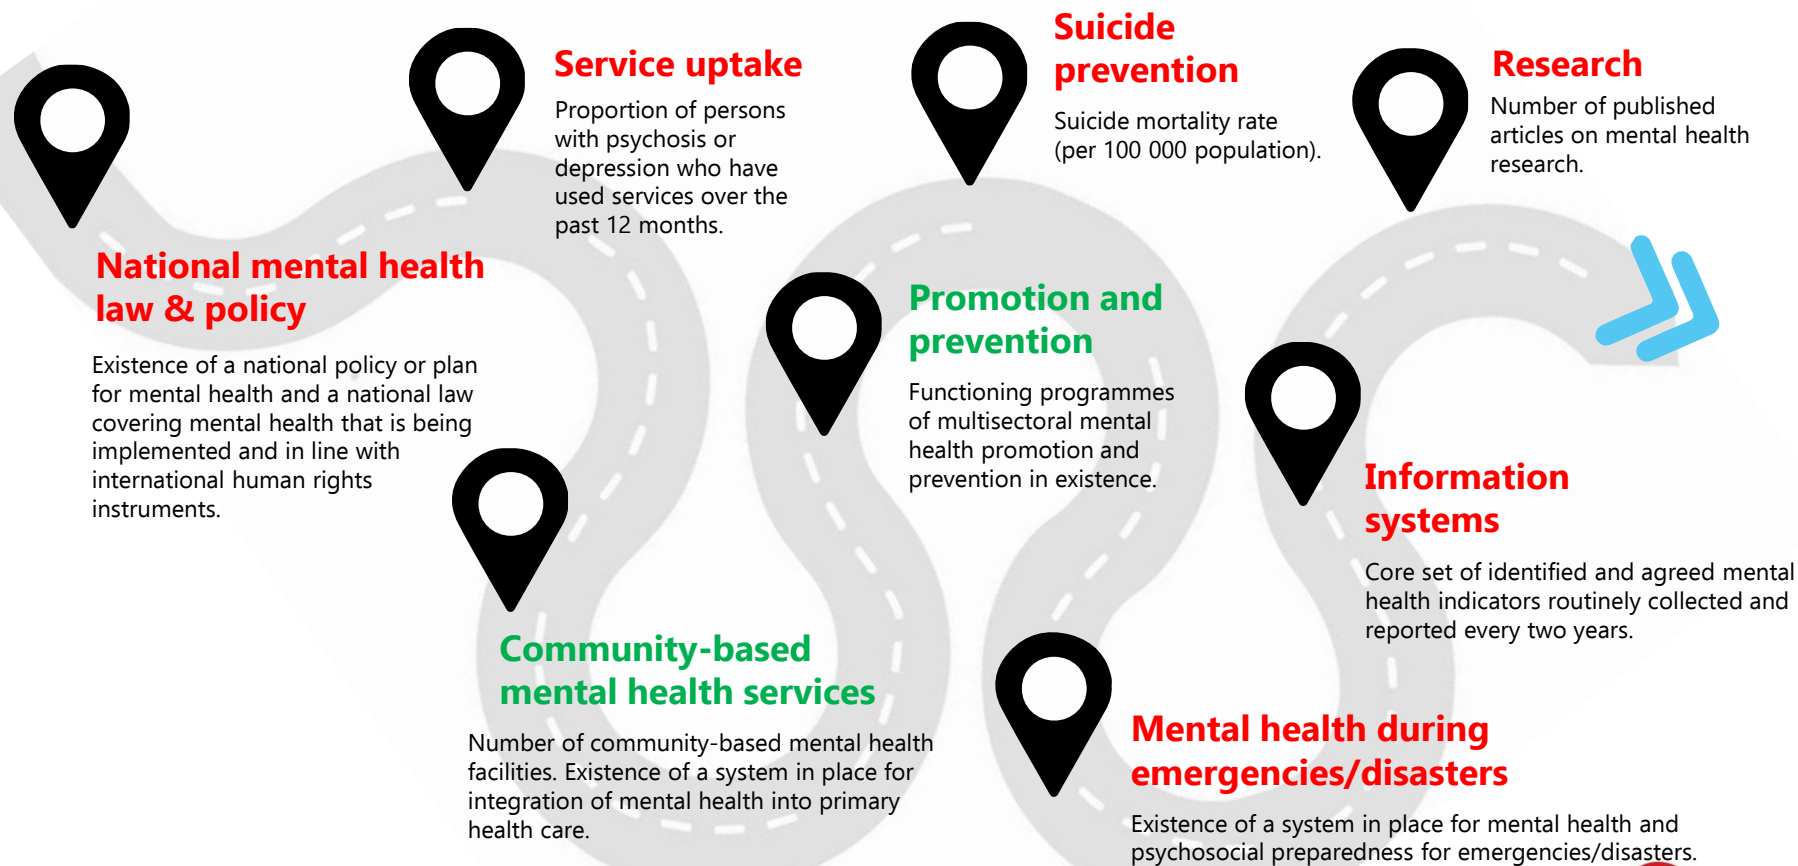

## 3. Strategies for promotion and prevention

- 80% of countries will have at least two functioning **national, multisectoral mental health promotion and prevention programmes**.
- The rate of **suicide** will be reduced by one-third.
- 80% of countries will have a system in place for mental health and psychosocial preparedness for emergencies and/or disasters.

## 4. Information systems, evidence and research

- 80% of countries will be **routinely collecting and reporting** at least a core set of mental health indicators every two years through their national health and social information systems.
- The output of global research on mental health will have doubled.

# INDICATORS...state of play in South Africa

# ACTIONS

♦ FOR MEMBER STATES

- 1 Effective leadership and governance**
- *Policy and law*
  - *Resource planning*
  - *Stakeholder collaboration*
  - *Strengthening & empowerment of people with mental disorders & psychosocial disabilities*

- 2 Comprehensive, integrated services in community-based settings**
- *Service reorganization & expanded coverage*
  - *Integrated and responsive care*
  - *Mental health in humanitarian emergencies*
  - *Resource planning*
  - Address disparities*

- 3 Strategies for promotion and prevention**
- *Mental health promotion and prevention*
  - *Suicide prevention*

- 4 Information systems, evidence and research**
- *Information systems*
  - *Evidence and research*

17/10/2023

# ACTIONS

♦ FOR INTERNATIONAL/NATIONAL PARTNERS

- 1 Effective leadership and governance**
  - *Mainstream interventions*
  - *Prioritize people with mental health disorders*
  - *Ensure inclusion of mental health within health policies and plans*
  - *Encourage effective policy exchange*
  - *Support mental health groups*
- 2 Comprehensive, integrated services in community-based settings**
  - *Use funds for service delivery*
  - *Support implementation of programmes during humanitarian emergencies*
- 3 Strategies for promotion and prevention**
  - *Raise awareness*
  - *Advocate for rights of persons with mental disorders*
  - *Include mental health within the disability agenda*
  - *Address stigma and discrimination*
  - *Promote mental health programmes*
- 4 Information systems, evidence and research**
  - *Set up surveillance/information systems*
  - *Support research*

# MH Integration; silos and missing linkages

---

**I'M....**

~~Depressed, sad, hurt,~~  
~~confused, lonely,~~  
~~unloved, judged,~~  
~~misunderstood,~~  
~~insignificant, broken,~~  
~~dying....~~

**..FINE**

**Speak out - "No!! Am not fine".....**  
**.....coz its ok...not to be okay!**

# Anxiety

---

# Balance it out

# That missing Link...or Trigger!!

---

# Building Back Better

---

---

**UHC that includes Mental Health**  
"Access to ~~health~~ is not only a precondition for, but also an outcome of, and an indicator of sustainable development"

United Nations Conference on Sustainable Development  
Rio de Janeiro, Brazil, 20-22 June 2012

# BBB mental Health systems post COVID 19
