

Mining for Mzansi,  
**Mining for Growth**

---

**FACT SHEET**

**The mining industry continues to make a significant difference in the lives of communities, employees, and the nation. It does so by driving investment, paying taxes and royalties, creating jobs and benefits, advancing education and training, and investing in social projects and infrastructure.**

In 2024, mining companies paid R195 billion in wages and salaries, accounting for 5% of all wages paid in South Africa. For 473,484 employees, and their families, this means supporting and sustaining the lives and livelihoods of more than a million people, assuming an average household of four people.

Considering the direct suppliers of goods and services to the mining industry, a further 400,295 people are employed, giving a total formal employment impact of 873,779 people, supporting 3.5 million people in an economy where four out of 10 adults do not have formal employment.

The mining sector has had the largest impact on provincial

GDP in the North West (R118 billion), Limpopo (R109 billion), and Mpumalanga (R99 billion) provinces, which contributed 26.68%, 24.67%, and 22.47%, respectively, to the total initial impact on GDP of the mining sector. The provinces that contributed the most to the direct impact on GDP were North West (19.86%), Limpopo (18.69%), and Gauteng (18.19%)

Mining remains a long-term investment play that rises and falls with economic cycles. A stable and predictable policy environment, supported by critical infrastructure, is essential to ensure the sector's ability to grow and thrive. For the Minerals Council South Africa, enabling this environment remains a central focus.

**In 2024, mining  
companies paid**

**R195  
billion**

**in wages and  
salaries, accounting  
for 5% of all wages  
paid in South Africa**

It is critical for mining to attract investment in exploration, mine development, and existing operations to expand job opportunities and extend the benefits of working in the industry.

The Minerals Council and its members continue to engage with government and organised business to address systemic challenges in legislation, energy, transport, and crime and corruption. At the same time, the mining industry is unlocking opportunities in renewable energy and critical minerals — aligning mining with the future of South Africa's economy.

## Through #MiningMatters

we recognise that when mining grows, South Africa grows — unlocking opportunities, building possibilities, and driving transformation across the nation.

Mining is more than a driver of exports and tax revenues. It is a sector that empowers communities, sustains livelihoods, and helps build a dignified and hopeful future for millions of South Africans.

Payments of taxes totalling **R342 billion** by mining companies and the entire value chain of businesses servicing mines, including taxes paid on wages of all employees, was equivalent to:

Building  
**213,974**  
small houses of  
approximately  
80 m<sup>2</sup> at  
R20,000 per m<sup>2</sup>

Constructing  
**17,118**  
kilometres  
of road at R20 million  
per kilometre

Paying the  
annual salaries of  
**978,166**  
high school teachers  
at a salary level of  
R350,000 per year

*\* R342 billion is a calculation of all taxes paid by the entire value chain serving the mining industry. (Source: Quantec Data)*

## Economic Impact

Mining contributed

**6%**  
**to South Africa's  
GDP**

in 2024, reaffirming its role as a major sector of the economy.

In the four leading mining provinces — North West, Limpopo, Mpumalanga and the Northern Cape — mining contributed between 20% and 30% of provincial GDP.

The mining sector had the largest impact on provincial GDP in the North West (R118 billion), Limpopo (R109 billion), and Mpumalanga (R99 billion) provinces, which contributed

**26.68%, 24.67%,  
and 22.47%,**

respectively, to the total initial impact on GDP of the mining sector. The provinces that contributed the most to the direct impact on GDP were North West (19.86%), Limpopo (18.69%), and Gauteng (18.19%).

The mining sector's influence on the South African economy in 2024 extended well beyond its immediate operations. Its initial GDP impact at market prices was R443 billion, representing 6% of total national GDP at market prices. This figure increases to

**R695  
billion**

when GDP at market prices from direct suppliers is included, reflecting broader sectoral interdependence.

**R3.9  
billion**

was invested in community projects, improving healthcare, housing, education, and local enterprise in mining communities.

The industry contributed over

**R117  
billion**

in taxes, including R42.6 billion in corporate income tax, strengthening South Africa's fiscus.

For every R10 million produced by mining companies and their direct suppliers contributed about

**R1.5  
million**

towards tax revenue in the economy.

In the 2023/2024 financial year, the mining industry paid royalties of

**R16  
billion**

The largest contributions to mining royalties came from the iron ore (25%), coal (24%), and platinum (23%) industries.

## Benefitting South Africa

Local sales, in 2024 totalled

**R248  
billion**

representing an  
annual increase of 5.1%.

The average growth in local sales  
was 5.7% over the last three years,  
10.1% over the last five years, and  
10.1% over the last ten years.

**Coal contributed  
R134.6 billion**

to local sales, representing more  
than half (54.3%) of total local sales.

Over time, coal's average share of  
local sales was 53% over the past  
three years, 52% over the past five  
years, and 48% over the past decade.

**Diamonds accounted for**

**R7.7 billion (3.1%),**

**Gold for R5.8 billion (2.3%),**

**PGMs for R4.97 billion (2%),**

**and Iron ore, R5.3 billion (2.1%).**

Other metals made up

R71 billion, contributing 28.6%,  
while other mining activities added  
R18.8 billion, or 7.6%.

## The industry invested R160 billion in machinery, equipment, vehicles, and construction,

accounting for 15% of South Africa's national gross fixed capital formation. When suppliers are included, capital formation rises to R193 billion. Capital formation is critical to sustaining economic growth.

### MINERAL LOCAL SALES BY MAIN COMMODITY 2000 TO 2024

Rand million

Local sales  
grew to

**R248  
billion**

## Employment & Skills Development

The **industry directly employed 473,484 people** in 2024

Direct suppliers to the mining industry employed more than 400,000 people, giving a **total direct employment impact of approximately 874,000 people**

**The year also marked the industry's safest on record**, with 42 fatalities. Each life lost is a tragedy, and the mining industry remains steadfast in its goal of achieving Zero Harm through safer, modern, and more sustainable mining practices.

For every R10 million in output generated by the mining sector, the industry **supported approximately 8 formal jobs across the economy** — this includes the employment impact of both its own operations and those of its direct suppliers.

**Women now comprise 19% of the full-time mining workforce**, showing steady progress in transformation and inclusivity.

**Mining employees earned nearly R195 billion in 2024**, sustaining livelihoods for thousands of families.

**The average annual wages within the mining sector were R577,597** for high-skilled workers, R328,996 for semi-skilled workers, and R246,924 for those in low- and unskilled roles.

The nationwide average wages for the three skill levels were R400,958, R205,851, and R113,083 in 2024.

**More than R5 billion was spent on training and development** in 2024 — equal to between R23,000 and R41,000 per employee — building skills for the future.

Mining companies  
and their suppliers  
collectively employ  
approximately

**874,000  
people**

## Household Income

The mining industry contributed

**R470  
billion\***

to household income, amounting to 7% of South Africa's total household income. When the household income of the sector's direct suppliers is incorporated, the total income rises to R680 billion\*, indicating the direct economic impact.

The platinum group metals (PGMs) made the largest contribution to economy-wide household income, generating

**R291 billion\***

and accounting for 20.39% of the total impact. Coal followed with R239 billion (16.72%), iron ore with R213 billion (14.90%), gold with R210 billion (14.72%), and chrome with R148 billion (10.38%), all of which significantly supported household income across the economy.

*\*(Source: Quantec Data)*

For every R10 million\* worth of minerals produced, mining helped support about

**R6.3  
million\***

in household income in the economy when the impact of its own operations and that of its direct suppliers is included.

## Mining at a Glance 2024

|                                                |                                                                   |                                                          |                                                  |                                                      |                                           |
